# ESSENCE OF STRENGTH

CARBON COMPOSITE LEATHER AND WOOD

Inspired by simplistic structural forms and made possible by the use of ultra-high-tech carbon composite materials, Essence of Strength is passionate in its design and creation of contemporary, mesmerizing furniture that defy normal design parameters. Embracing and celebrating the extraordinary structural properties of carbon fibre are key to the philosophy behind this exciting new venture. Essence of Strength enables those individuals with a desire for unique, bespoke and iconic furniture built using advanced carbon technologies to be commissioned, designed and realised.

Industrial designer Kristian Arens takes his structural inspiration from organic forms found in nature and uses natural curves to deliver the inherent structural strength in his cantilevered furniture designs which support varying human postures. Kristian's gravity defying designs are a true engineering accomplishment that aim to deliver simplistic, luxurious elegance.

All Essence of Strength pieces are designed in Great Britain and manufactured using high-tech carbon composite skills and artisan craftsmen for the bespoke leather and wood finishes
