UNVEILING TRADITIONAL FLOORING
that never goes out of fashion

DÉCOR is where style lives - the essential design resource for those with a passion for creating beautiful surroundings

Essence of Strength draws on the combined talents of Kristian Arens, a highly experienced industrial and superyacht designer with expertise in advanced composite materials together with Clive Johnson, a seasoned entrepreneur with a track record in delivering highly bespoke advanced composite products for ultra-high-net-worth individuals including the world's two largest carbon composite sailing rigs.

This hugely experienced partnership has the passion and ambition to design bespoke and truly iconic contemporary furniture using a mix of ultra-modern carbon composites married with exquisite wood and leather bespoke artisan finishes.

The pieces are all designed in Great Britain and are manufactured using high-tech composite skills combined with artisan craftsmen for the bespoke finishes.

GRAVITY DEFYING GARDEN FURNITURE

Inspired by simplistic structural forms and made possible by the use of ultra-high-tech carbon composite materials, Essence of Strength has launched a range of mesmerising furniture.

The contemporary, gravity defying furniture uses natural curves to deliver inherent strength while the advanced composite materials enable cantilevered forms to push design parameters to support varying human postures. The designs are a true engineering accomplishment, delivering simplistic, luxurious elegance.

Created by the British industrial designer, Kristian Arens, the collection comprises a Chaise Longue, Cobra High Stool and a range of super lightweight carbon Aero Benches. The products contrast novel carbon fibre technologies with hand crafted leather and wood veneers.

Taking structural inspiration from natural organic forms, these highly engineered designs use a complex and intricate alignment of carbon threads to create fluidity of shape whilst ensuring incredible strength, super-thin profiles, and feather-like weight.

Whilst a number of furniture designers and manufacturers use carbon predominantly as an aesthetic and decorative feature, the highly experienced duo behind Essence of Strength has, for the first time, produced a range of furniture that embraces and celebrates the extraordinary structural properties of carbon fibre, which would not be practical, if at all possible, using more traditional materials.
